Welcome

Dear Students,

Welcome to the second year medicine. As you have already started in the Faculty curriculum (System- Based Curriculum), this year you are in Phase I of the program.

Phase I : Premedical Year (First Year)

Phase II : Second and Third Years

Phase III : Fourth, Fifth and Sixth Years

The aim of this phase is to lay down a solid foundation for the subsequent full-time clinical study in stage II and III of the MBBS program. This include knowledge, skill and attitudes, particularly attitudes towards the learning process. The curriculum philosophy in stage I is enforcing the development of a mixture of teaching approaches including Lectures, Practicals, also small group teaching. It is also stressing on the idea of "Student Self Directed Learning".

The department has the honor to introduce this study guide to you hoping that it may be helpful in making you oriented with the aims, objectives, contents of our courses, and through it, you will find the answers of the frequently asked questions.

All the Best

Department Chairman

TABLE OF CONTENTS

TOPIC	Page
THE OUTCOMES OF THE UNDERGRADUATE CURRICULUM	1
CURRICULUM MAP	2
STRUCTURE OF THE MODULE	2
INTRODUCTION	3
AIMS & OBJECTIVES	4
TEACHERS CONTACTS	4
ASSESSMENT	5
ICONS	7
TOPIC OUTLINES	8
No. LECTURES (NAMES)	
01 Torque	
02 Centre of gravity	
03 Mechanical Levers in the human body	
04 The advantages of mechanical levers in the body	
05 Bernoulli's equation	
06 The role of gravity in blood pressure	
07 Blood pressure measurement by Sphygmomanometer	
08 Poiseuille's law- Flow in the circulatory system	
09 Electrical units	
10 Some electrical proprieties of the axon	

11	Ionic concentration and resting potential	
12	The response to weak stimuli	
13	General properties of sound waves	
14	Sound sources- Auditory responses	
15	Ultra sound	
16	The Doppler effect and the Doppler flow meter	
17	Reflection and light refraction	
18	Image formation- power of the lens	
19	The human eye	
20	Optical defects and corrections	
21	Radioactivity	
22	Effective half life	
23	Radiation type	
24	Interaction of radiation with matter	
25	x-ray uses in medicine	
26	Types of Radiation and life time	
27	Radiation units	
28		
29		
30		
No.	PRACTICAL (Names)	
01	Introduction	
02	Simple Pendulum	
03	Density of solid	

04	Ohm's law	
05	Lenses	
06	Quiz	
07	Diffraction grating	
08	discharge of capacitor	
09	Viscosity of water	
10	CRO	
11	Velocity of sound	
12	Static equilibrium	
13	Surface tension	
14	Revision	
15	OSPE	
	STUDENT-DIRECTED LEARNING (SDL)	
	TUTORIALS
